We go beyond the limits...

Products

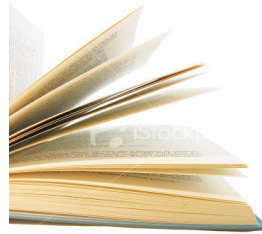

netDOC- Document Management Systems

This is a generalized product that can be configured to meet the specific solution for managing the documents to create paperless environment using workflows.

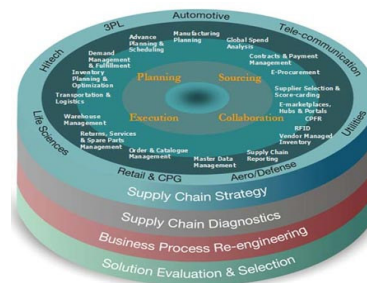

It is configurable and can be implemented based on the customer requirement based on the structure of the organization. We provide implementation & technical support to the customers through our trained executives in the DMS & Workflow systems. They have depth of knowledge in interacting with customers, understanding the storage & Retrieval process, configuring the workflow and configuring the Documents, training the Administrators and the other users. They have knowledge on Systems & Database such as SQL Server, Oracle & Access.

iLib- Intelligent Library

iLib is Library management software for any kind of library for managing the Book issue, return etc. It has Virtual rack implementation and web interface for search/reserve, renew of any book. Budgeting, purchase of books, subscription of journal etc. Additionally optional E-Resource management and Digital Library module.

MATIS Material Automation & Tender Information System.

This software is designed to automate the entire process of material procurement which includes Budget management, demand process, tender procedures, supply orders, material receipt, issues, inventory etc typically for Government/ public sector organization. It is already been under implementation at different DRDO organization.

Payroll Managements

Payroll Management System (PMS) is a web-based system. Objective is automating various measures related to the pay bill, pay slip and many other slips as per the grade, category and designation.

The system work with a workflow to route different documents to different role. In any transaction there can be multiple people taking different actions sequentially or parallel. All of them will be routed through the workflow system.

Once the action is taken entry details of the actions will be captured in the system. System has a provision to capture corrective action plans against the observation. It is possible to assign the action to be taken by a role.

PMS gives records of loan schedule, car schedule and many other schedules like GPF Withdrawal, Form 16, Loan Register and many more.

And many more...
